

CHILD I.D. CARDS

It's new...

A convenient alternative to the traditional ink finger printing method. This **NEW** process is digital and requires an impression from just **one** finger (the right index finger). Best of all this process does not require any ink and it incorporates the photo and finger print into one neat, durable package (3.5 x 2.5" plastic card).

FRONT

BACK

It's easy...

- ★ **Photo**
A Full Color Digital Portrait
- ★ **Finger Print**
A Digital Scan of Right Index Finger *Only*

Here's how it works...

Please provide the operator with detailed information about your child as it will appear on his/her Identification card. Use the forms provided to insure information accuracy.

1). Using a specially designed digital camera, your child's image is captured electronically. The image will then be transferred to the I.D. card.

2). Next, the finger print process. A digital scan of the right index finger is all that is required. It takes a few seconds. There's no ink involved in this process.

3). Lastly, the I.D. card is produced while-you-wait. Your child's photo, finger print and personal data are combined to make your child's personal I.D. card. It's a convenient size and it's made from durable plastic.
